# The HERMA M Series

## Speed, precision, technical perfection.

The HERMA M Series is ideal whenever uncompromisingly high performance standards are demanded for two-side or wrap-around labelling: its mature technical concept combines unbeatable speed with opti-

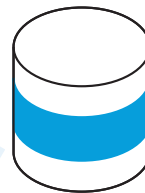

mum precision and extreme reliability in both stand-alone and inline operation.

Thanks to the compact modular structure based on standard components, these machines can be tailored

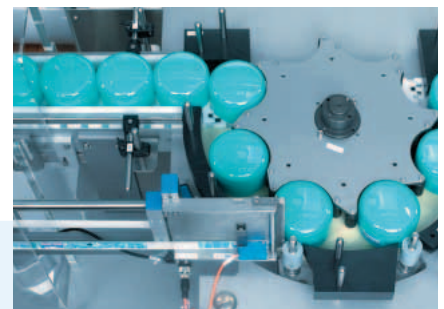

exactly to the specific requirements of the user – without costing a fortune. The operator-friendly, ergonomic design, short set-up times and easy format changes make the system even more economically attractive.

## The tough specialists for wrap-around labelling.

HERMA 132 M and 040 M

Continuously rotating starwheel – HERMA 132 M

Dispensing labels in intermittently rotating star wheel – HERMA 040 M

Among the other optional functions are units for dispensing faulty labels or ejecting incorrectly labelled products.

The HERMA labelling machine 132 M with continuously rotating star wheel for heavy-duty operation of up to 400 products per minute.

With its intermittently rotating star wheel, the HERMA 040 M is designed for extremely precise labelling of approximately 200 products per minute. It is especially suitable for long, low labels.

Retooling for different product formats is child's play.

Labels can optionally be aligned with salient product features or two labels applied.

Monitoring devices such as print and code control guarantee safe working at all times.
