

311

Semi-automatic two-side labelling machine

- > **Unique:** Simultaneous labelling of two sides – suitable for small batches
- > **Simple:** Automatic product guiding
- > **Fast:** Minimum set-up times
- > **Flexible:** Precise label placement at any operating speed

Efficient semi-automatic two-side labelling, without compromising on precision:
The compact and robust HERMA 311 provides an economical and reliable solution for small batch labelling.

Main Features

> The drive

The HERMA 400. Proven in many applications, versatile, powerful, precise.

The labelling speed is synchronized with the speed of the product by means of an encoder.

This ensures consistently precise label placement.

> The idea

Pushing the product holding jig forward secures the product in the correct labelling position. The labelling cycle is started when the unit is retracted. Products are automatically released at the end of the cycle.

Place the products into the holder,
push it towards the labelling station:

Products are automatically held in position!

Retract from the
labelling station:

Perfectly labelled on both sides.

We are constantly endeavouring to improve our products.
All technical data is therefore subject to change without prior notice.
