ACCUPROOF PRINT CHECK

Accuproof Print Check™ is a versatile solution for quick and accurate proofreading of in-process or incoming inspection requirements in a time-sensitive environment.

Print Check utilizes a proven image comparison algorithm to quickly and accurately identify and highlight differences between Master and Sample documents. Highlighted differences are detected two ways, visually using the defect map and digitally using software-generated rectangles.

Simple one-button import along with scan and compare functions allow the operator to fly through the set-up phase of the comparison. Once the comparison is processed digital and visual tools allow the operator to quickly analyze results.

A wide range of imaging devices are compatible with Print Check; the system can be customized to fit the need of individual organizations. Print Check is also compatible with a wide range of common file formats to allow speedy comparison of electronic master documents to their corresponding scanned hard-copy:
File Types:

Imaging Device:
A3 Scanner

Simple easy-to-use features allow automatic or manual alignment of overlay for comparison.

Example of comparison overlay.

Comparison Tri-Window featuring zoomed view of Difference Map.

Results are displayed in a 3-paned window; Master document, Sample document, Difference Map. The Difference Map allows quick visual inspection reflecting differences between the documents. Computer generated rectangles represent divergence between the Master and Sample.
