

#### What is it?

AIS Commander serves as the intermediary, or middleware, between your label design software (Bartender, Nicelabel/ Loftware etc) and your V275 inspection software. AIS Commander automates the process of V275 'job' selection and automatically inserts variable data from multiple text and barcode fields, from your verified label, into the V275 inspection system, making this tedious and error-prone process fast, seamless and highly accurate.

#### Main Features

- The customer retains full control over the operator's interaction with the AIS Commander.
- The AIS Commander is highly adaptable and can be tailored to fit the customer's workflow seamlessly i.e. directly scan product labels into the commander, bypassing the need for interaction with underlying software.
- Automatic configuration of label variables.
- Local user control with customizable access levels.
- Oversight and management of V275 alarms.
- Real-time display of the current batch status.
- Interactive foreground monitoring panel.
- Produce batch reports.
- Option to save both the initial and final good images, or all images.

#### About AIS Group

AIS Group is a leading provider of highly technical and engineered solutions, comprising five specialised companies: AIS Ltd, AIS Vision, AIS Scanology, AIS Automation, and Rosepetal. With a dedicated team of 60+ professionals across Ireland, Spain, and the Netherlands, AIS Group delivers cutting-edge solutions in automatic labelling/printing, vision inspection, barcode scanning/verification automation and coding/marketing to large multinationals and SMEs in industries such as life sciences, food & beverage, and manufacturing.
